

PVC & Mesh Banners

Sizing for banners:

1. Always design your banner with an additional 40mm all the way round for hemming.
2. Always take your artwork right to the edge, including the 40mm bleed area, but remember the eyelets - so always keep important design elements within 40mm of the finished banner size.
3. Banners are printed at a minimum of 150dpi at full size. It is your responsibility to check all resolutions before uploading your artwork.

Example

Bleed for folding / hemming 40mm all around
